

CONSORTIUM

UNCAN-Connect unites **53 partner organizations from 21 countries** in a geographically and institutionally diverse European alliance, combining expertise in biomedical research, clinical practice, data science, digital infrastructure, and policy-relevant knowledge to address complex cancer challenges at scale.

Let's stay
connected!

ABOUT THE PROJECT

UNCAN-Connect is a five-year Horizon Europe project (2025 - 2030) under the EU Mission on Cancer, designed to address fragmentation in cancer research data across Europe.

By building a **federated data ecosystem**, the project will bridge technical infrastructure, data governance, and clinical validation to accelerate patient-centred research and innovation.

UNCAN-Connect will create a secure, harmonised federated platform that links diverse cancer data, tools, and expertise to enable cross-border cancer research collaboration and drive new insights for improved prevention, diagnosis, and treatment.

ELEVEN USE CASES ACROSS SIX CANCER TYPES

PANCREATIC

PAEDIATRIC

LYMPHOID

LUNG

PROSTATE

OVARIAN

Real-world use cases will drive the project by generating evidence, best practices, and policy insights for scalable, interoperable collaboration across Europe.

IMPACT

UNCAN-Connect is building the foundations for a new way of working with cancer data in Europe - one that is secure, collaborative and scalable.

- Improving data quality and interoperability across Europe enables more reliable and comparable cancer research.
- Supporting earlier detection and improving patients' quality of life.
- Advancing the identification of biomarkers, risk factors, and innovative diagnostic and therapeutic approaches.
- Accelerating progress in cancer prevention and treatment through better access to high-quality data.
