

UNCAN Connect

Decentralized Collaborative Network for Advancing Cancer Research and Innovation

Main results:

Central UNCAN.eu Platform acts as the main coordination, navigation and capacity-building of the UNCAN-Connect infrastructure, in line with the e-cancer recommendations.

A common governance, communication and operation framework aligned with GDPR and the upcoming European Health Data Space (EHDS).

Impact:

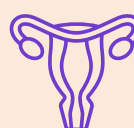

- Improved data quality and interoperability across the EU, enabling more reliable, comparable cancer research
- Enhanced early detection of cancer, improved Quality of Life
- Novel biomarkers, risk factors, diagnostic and therapeutic tools for different cancer types
- Faster progress in cancer prevention and treatment, driven by better access to high-quality data

Six cancer types and eleven use cases form the core of the project, driving its development, validation, and real-world impact.
